User Manual

OriCell™ Mouse Embryonic Fibroblast Growth Medium

Cat. No. MUXEF-90011
PRODUCT DESCRIPTION:

OriCell™ Mouse Embryonic Fibroblast Growth Medium consists of optimized Mouse Embryonic Fibroblast (MEF) Basal Medium and pre-selected fetal bovine serum. This product has been developed for the optimal proliferation of mouse embryonic fibroblasts (MEFs).

The product is intended for laboratory research use only. It is not intended for diagnostic, therapeutic, clinical, household, or any other applications.

KIT COMPONENTS:

- Mouse Embryonic Fibroblast (MEF) Basal Medium (Cat. No. MUXEF-03011) 440 mL
- Mouse Embryonic Fibroblast (MEF)-Qualified Fetal Bovine Serum (Cat. No. MUXEF-05001) 50 mL
- Penicillin-Streptomycin 5 mL
- Glutamine 5 mL

INSTRUCTIONS:

Preparation of the Complete Medium

1. Prior to use, thaw the MEF-Qualified Fetal Bovine Serum at 2-8°C overnight or until completely thawed. Gently swirl the bottle to ensure homogeneity. The serum has been heat-inactivated and is ready to use after thawing.

   Note: The thawed serum may contain some flocculent precipitates. The presence of these substances in serum does not alter the performance characteristics of the product. It is not recommended to filter the serum to remove these precipitates. Doing so may result in the loss of some serum nutrients.

2. About 30 minutes prior to use, thaw the Penicillin-Streptomycin solution and Glutamine solution at room temperature. Gently swirl the vials to ensure homogeneity.

3. Disinfect the external surfaces of the bottles/vials for every component in the kit with 70% v/v ethanol. Allow ethanol to evaporate.

4. Aseptically open the bottles/vials inside a laminar flow hood.

5. Transfer the entire amount of MEF-Qualified Fetal Bovine Serum, Penicillin-Streptomycin solution, and Glutamine solution into the MEF Basal Medium.

6. Rinse each vial with a small amount of basal medium. Subsequently transfer the rinse medium back into the bottle of basal medium.

7. Gently swirl the fully supplemented (complete) medium to ensure a homogeneous mixture. The complete medium is now ready to use.

   Note: Although each component in this kit is supplied sterile, it is strongly

IMPI0018A2 MUXEF-90011 Page 2 of 3
recommended to filter the fully supplemented (complete) medium.

**STABILITY AND STORAGE:**

All products should be stored in the dark. MEF Basal Medium is stable at 2-8°C for up to one year. Other components are stable at -20°C for up to two years.

These products should be discarded beyond the labeled expiration date. Once prepared, the fully supplemented (complete) medium can be stored for up to one month when stored in the dark at 2-8°C.

For optimal performance, repeated warm-cooling and freeze-thawing should be avoided.

**QUALITY CONTROL:**

OriCell™ Mouse Embryonic Fibroblast Growth Medium has been tested for performance on mouse embryonic fibroblasts. The standard evaluation includes:

- Sterility test (bacteria, fungi, and mycoplasma)
- pH test
- Osmolality
- Endotoxin
