

## Certificate of Analysis

**Mouse (C57) Mesenchymal Stem Cells**

Catalog No. MUBMX-01001

Lot Number: 180823R41

Cryopreservation Date: 2018-08-23

Passage Number: 6

---

### Viability

Cells are assayed for viability post-thaw using vital staining assay with trypan blue.

Specification: Cells should exhibit  $\geq 70\%$  viability.

### Sterility

Bacterial and Fungal Contamination: Samples are inoculated and cultured in blood agar plate, thioglycolate broth, tryptocase soy broth and sabouraud dextrose agar for 14 days.

Specification: No growth must be observed.

Mycoplasma: Samples are tested for mycoplasma contamination using a PCR-based assay and direct culture.

Specification: Results must be negative.

Endotoxin: Samples are tested for endotoxin contamination with LAL test.

Specification: Results must show  $\leq 25\text{EU/ml}$ .

### Purity

Cells are assayed for purity using flow cytometric analysis of cell surface antigen expression after cryopreservation. Cells are immunofluorescently stained with fluorochrome-conjugated antibodies specific to cell surface antigens CD29, CD44, CD117, CD31 and Sca 1.

Specification: Cells must show  $\geq 70\%$  positivity for expression of cell surface antigens CD29, CD44, and Sca-1. Cells must show  $\leq 5\%$  positivity for expression of cell surface antigens CD117 and CD31.

### Proliferation Ability

The cells are characterized by their ability to proliferate in culture with an attached well-spread morphology for  $\geq 5$  passages, and  $\leq 5\%$  cells exhibit spontaneous differentiation in each passage.

### Differentiation Ability

The cells are assayed after cryopreservation for their ability to differentiate into chondrocytes, about 60% cells are stained with a dye that detects each cell type.

**Results:**

All specifications have been met.
